

Proceedings

Sisal '93

Editor

John T. Feo

Lawrence Livermore National Laboratory
Livermore, California

Sponsored by

Computer Research Group

*Lawrence Livermore National Laboratory
Livermore, CA*

October 3-5, 1993

San Diego, California

Contents

Programmability and performance issues: The case of an iterative partial differential equation solver <i>Chinhyun Kim, Jean-Luc Gaudiot and Wlodek Proskurowski</i>	1
Implementing the kernal of the Australian Region Weather Prediction Model in Sisal <i>Greg Egan</i>	11
Even and quarter-even prime length symmetric FFTs and their Sisal Implementations <i>Jaime Seguel and Dorothy Bollman</i>	18
Top-down thread generation for Sisal <i>Bhanu Shankar, Wim Böhm and Walid Najjar</i>	25
Overlapping Communications and Computations on NUMA architectures <i>Richard Wolski and John Feo</i>	40
Compiling technique based on dataflow analysis for funtional programming language Valid <i>Eiichi Takahashi, Rin-ichiro Taniguchi and Makoto Amamiya</i>	47
Copy elimination for true multidimensional arrays in Sisal 2.0 <i>Steven Fitzgerald</i>	59
Increasing Parallelism for an optimization that reduces copying in IF2 graphs <i>Steven Fitzgerald</i>	74
Caching in on Sisal: Cache performance of Sisal vs. FORTRAN <i>Phil Nico and Arvin Park</i>	85
FFT algorithms on a shared-memory multiprocessor <i>Anthony Cricenti and Greg Egan</i>	91
A parallel implementation of nonnumeric search problems in Sisal <i>Andrew Sohn</i>	103

Computer vision algorithms in Sisal <i>Srdjan Mitrovic and Marjan Trobina</i>	114
Compilation of Sisal for a high-performance data driven vector processor <i>William Miller, Walid Najjar and Wim Böhm</i>	120
Sisal on distributed memory machines <i>Sande Pande, Dharma Agrawal and Jon Mauney</i>	134
A virtual shared addressing system for distributed memory Sisal <i>Matthew Haines and Wim Böhm</i>	151
Developing a high-performance FFT algorithm in Sisal for a vector supercomputer <i>John Feo and David Cann</i>	164
Implementation issues for IF2 on a static data-flow architecture <i>Linda Wilkins and Aaron Enright</i>	175
Systematic control of parallelism in array-based data-flow computation <i>Kanad Roy and Carl McCrosky</i>	189
